

# WMS Hand-held transmitter plus

## Operating and installation instructions

*Der SonnenLichtManager*

Valid from  
1 May 2023  
Keep for future use.

### General information

Fig. 1 WMS Hand-held transmitter plus

The WMS Hand-held transmitter plus is used for the remote control of WAREMA WMS receivers. The receiver sends a confirmation of the received commands, and the WMS Hand-held transmitter plus indicates that it received the confirmation.

The WMS Hand-held transmitter plus supports five different product types (awning, roller shutter, external venetian blind, window, light).

Only one receiver or one group with multiple receivers of the same product type can be actuated at any one time per channel (6 channels).

The comfort control functions can be switched on and off by channel via the WMS Hand-held transmitter plus.

A WMS Hand-held transmitter, a WMS Central transmitter or the WMS studio software is needed for commissioning a weather station.

If a control function is preventing operation of the product (e.g. a wind alarm), this is also displayed on the WMS Hand-held transmitter plus.

The transmitter is compatible with:

Additional information can be found at:  
[www.warema.com/en/wms](http://www.warema.com/en/wms)

### Intended use

The WMS Hand-held transmitter plus is an electronic device to control WMS receivers. The approval of the manufacturer must be obtained for uses outside of the purposes listed in these instructions.

### Safety instructions

#### CAUTION

The WMS Hand-held transmitter plus is for indoor use only. It is not water-proof. Do not leave the WMS Hand-held transmitter plus outdoors.

#### CAUTION

Never activate buttons on your WMS Hand-held transmitter plus arbitrarily without a line of sight to the sun shading system. Children must not play with this product – keep remote controls and transmitters out of the reach of children!

Follow the steps below in the order shown to ensure problem-free operation:

- Please read these instructions carefully.
- Insert the batteries.
- Learn the WMS Hand-held transmitter plus into the receivers.
- Check that the unit is functioning correctly.

### Commissioning

Further information and aids such as video guides and the WMS practical manual can be found on our support site.

[www.warema.com/radio-systems-support](http://www.warema.com/radio-systems-support)

- Insert the supplied batteries into the battery compartment as described in the "Maintenance" section. The device is then ready for operation.

Commissioning can also be carried out using the WMS studio pro or homee PC software.

Before WMS receivers can be operated via a hand-held transmitter, the hand-held transmitter or the receiver must be included as a device in a radio network.

## Operating elements and displays

Fig. 2 Operating panel of the WMS Hand-held transmitter plus

Fig. 3 Back of the WMS Hand-held transmitter plus

Pos.	Function	Result
<b>Front</b>		
1	Control button <b>A</b>	Switching the comfort control functions on or off.
2	Control mode LED <b>A</b>	Lights up green = Comfort control modes activated Lights up red = Comfort control modes deactivated Flashes red = Operation disabled
3	Control mode LED <b>A</b> and transmission LED  flash	Flashes orange = Hand-held transmitter plus has the factory settings Flashes red = Button pressed too long, factory mode To close this mode again, briefly press the Learn button
4	Transmission LED	Flashes green = Hand-held transmitter plus is transmitting Flashes red = The Hand-held transmitter plus has not received a response from the receiver Flashes orange: = Change the batteries
5	buttons	Send move or switch commands to the selected receiver
6	LED display channel 1 to 6 	Selected channel lights up red (here 2)
7	Change channels button <b>(+)</b>	Toggles between channels 1-6 The display skips any unassigned channels and goes to the next assigned channel (e.g. from channel 1 to channel 3).
8	Comfort button <b>C</b>	Saving and recalling comfort positions
<b>Back</b>		
7	Batteries	The hand-held transmitter plus requires two batteries of type AAA (IEC LR03, "Micro").
8	Learn button	Activates or closes learn mode
9	L LED	Lights up green = Learn mode active

## Learning in receivers

The first receiver to be learned into the Hand-held transmitter defines the channel type. If an external venetian blind is the first receiver to be learned in, the channel type is defined as an external venetian blind channel and only external venetian blinds can be learned in.

To assign a new channel, press the change channel button **(+)** for 5 s.

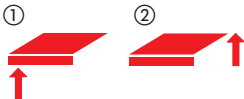

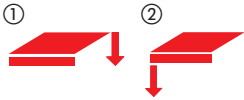

Learning in receivers	Wake up transmitter		Briefly press the stop button		Transmission LED lights up
	Select channel		Press change channel button, select channel.		Selected channel lights up red (here 2)
	Start scan process		Press the L button for approx. 5 s		Transmission LED lights up green for 2 s = Target device (receiver, transmitter or sensor) found, receiver detected, scan continues
					Transmission LED lights up orange for 2 s = no target device found, scan complete
					Transmission LED lights up red for 2 s = Target device found, but not yet learnt in, new receiver found
	Identify receiver		Briefly press the A button		Product waves
					Control mode LED flashes green with a receiver for which the product type can be adjusted. The type of product displayed depends on the flashing frequency: 1 x green: Awning                      2 x green: Roller shutter 3 x green: External venetian blind    4 x green: Light 5 x green: Window
	Set product type		Briefly press the up or down arrow button		Optional briefly press the C button
					Next receiver is selected
	Save allocation		Briefly press the stop button		Transmission LED lights up green for 2 s = Confirms the allocation
	Scan process continues		The scan process is repeated automatically until no more new devices are found		Transmission LED flashes green
					Transmission LED lights up orange for 2 s
	Complete process		Briefly press the L button		Process is completed

## Operating products

When the ▽ button is pressed again while the sun shading product is being lowered, it always moves to 100% (lower limit position) and the “Position DOWN” value is ignored.

Operating products	Select channel			
		Press change channel button, select channel.	→	Selected channel lights up red (here 2)
	External venetian blind			
		Press and briefly hold the up or down arrow button		The external venetian blind moves in the selected direction e.g. up
			→	
		Briefly press the up or down arrow button		The external venetian blind turns in the selected direction e.g. slats tilt up
		Press stop button or keystroke in opposite direction		Product stops
	Roller shutter		→	
		Press the up or down arrow button		The roller shutter moves in the selected direction e.g. up
		Press stop button or keystroke in opposite direction		Product stops
	Awning		→	
		Press the up or down arrow button		The awning moves in the selected direction e.g. up
		Press stop button or keystroke in opposite direction		Product stops

Operating products	Awning with valance roller blind				The awning moves in the selected direction e.g. up
					The valance roller blind moves in the selected direction e.g. up Awning position does not change
			→		Valance roller blind moves up ①, then the <b>awning moves</b> up
					Awning moves down ①, then the <b>valance roller blind moves</b> down ②
					Product stops
	Window				Window moves in the selected direction
			→		Product stops
	Light		→		Light is switched On (  ) or Off (  )
					Switch product (ON→OFF, OFF→ON)

Comfort position

- 

If a product is already in the comfort position or if a comfort position has not been stored, the selected product does not respond when the comfort button  is pressed.
- 

If the unit does not move to the comfort position correctly, the run time in the receiver has to be adjusted.

Comfort position	Learn			
		Press the up or down arrow button		Move to desired position (in this case, e.g. external venetian blind up)
	Move			
		Press the C button for 5 s		Transmission LED lights up green for 2 s = Comfort position saved
	Move			
				Transmission LED lights up red for 2 s = Command not confirmed Repeat process
	Move			
				The unit moves to the comfort position (e.g. up)

Comfort control modes

Comfort control modes	Channel selection			
		Press change channel button, select channel.		Selected channel lights up red (here 2)
	Switch on / off			
		Press the A button briefly		The control mode LED lights up green = Control modes On
	Switch on / off			
				The control mode LED lights up red = Control modes Off

## Deleting learned-in products from the WMS Hand-held transmitter plus and the network

Devices that do not need to be deleted must be de-energised.

If you delete a receiver from the network, it can no longer be operated via other transmitters. It must be learned into a network again.

Deleting receivers	Wake up hand-held transmitter		→	
		Briefly press the stop button		Transmission LED lights up
	Select channel		→	
		Press change channel button, select channel.		Selected channel lights up red (here 2)
	Start scan process		→	
		Press the L button for approx. 5 s		Transmission LED lights up permanently (orange or red) = Scan is complete
	Send delete command		→	
		Briefly press the stop and C buttons at the same time		Product waves = Delete command carried out
	Resend delete command		→	
		Repeatedly press the stop button		until all products to be deleted have waved.
	Complete process		→	
		Briefly press the L button		Process is completed

When you delete a receiver from the network, it can no longer be operated via other transmitters. It must be relearned into a network.

It only makes sense to delete products via the WMS Hand-held transmitter plus in smaller networks (two to three awnings or roller shutters). In more complex networks and when routing tables are used, a WMS Hand-held transmitter comfort or a central control unit should be used for deletion.

## Maintenance

### Replacing the batteries of the WMS Hand-held transmitter plus

Replace the batteries if the transmission LED lights up orange after the WMS Hand-held transmitter plus is activated. If the batteries are fully depleted, the WMS Hand-held transmitter plus can no longer be activated.

- In order to replace the batteries (type AAA, IEC LR03, "Micro"), open the battery compartment (*Fig. 3*) and insert the new batteries. Ensure the correct polarity: The plus (+) and minus (-) poles of the batteries must agree with the marks in the battery compartment.
- Only use new batteries of the same type and always replace both batteries. Use high-grade batteries – inexpensive batteries may leak and damage the device. If the device will not be used for an extended period, please remove the batteries. Do not use rechargeable batteries!

### Cleaning

Clean the housing with a soft, dry cloth. Do not use detergents, cleaning agents, solvents, abrasive substances or steam cleaners!

### Liability

Failure to comply with the product information in these instructions and use of the unit in a manner other than its intended use may result in a refusal by the manufacturer to honour warranty claims for product damage. In this case, liability for consequential damage to persons or property will also be excluded. Observe the information in the operating instructions for your sun shading system. Liability is also excluded for damage to the sun shading system resulting from operation while iced over.

### Obligations for the disposal of electrical devices

A marking with this symbol indicates the following obligations under the scope of legal regulations:

- The owner of this electrical device must dispose of it separately from unsorted municipal waste for further recycling.
- Used batteries and accumulators that are not enclosed in the old device, as well as lamps/bulbs that can be removed from the old device without breaking, must be disposed of separately.
- Distributors of electrical devices and disposal companies are obliged to take back the equipment free of charge.
- The owner must take it upon themselves to delete any personal data contained in the electrical device prior to disposal.
